Preface to the Third Edition

This new edition has been enlarged to contain all the material in the second edition, an expanded chapter on statistics that now includes sample size estimations for means and proportions, and a totally new chapter on financial mathematics. In adding this new chapter we have also included a number of tables that aid in performing the calculations on annuities, true interest, amortization schedules, compound interest, systematic withdrawals from interest accounts, etc. The treatment and style of this material reflect the rest of the book, i.e., clear explanations of concepts, relevant formulas, and worked examples. The new financial material includes analyses not readily found in other sources, such as the effect of lump sum payments on amortization schedules and a novel “in-out formula” that calculates current regular deposits to savings in order to allow the start of systematic withdrawals of a specified amount at a later date. While many engineers, mathematicians, and scientists have found much use for this handy pocket book, this new edition extends its usage to them and to the many business persons and individuals who make financial calculations.

R.J.T
Philadelphia

Preface to the Second Edition

This second edition has been enlarged by the addition of several new topics while preserving its convenient pocket size. New in this edition are the following topics: z-transforms, orthogonal polynomials, Bessel functions, probability and Bayes' rule, a summary of the most common probability distributions (Binomial, Poisson, normal, t, Chi square and F), the error function, and several topics in multivariable calculus that include surface area and volume, the ideal gas laws, and a table of centroids of common plane shapes. A list of physical constants has also been added to this edition.

I am grateful for many valuable suggestions from users of the first edition, especially Lt. Col. W. E. Skeith and his colleagues at the U.S. Air Force Academy.

Preface to the First Edition

The material of this book has been compiled so that it may serve the needs of students and teachers as well as professional workers who use mathematics. The contents and size make it especially convenient and portable. The widespread availability and low price of scientific calculators have greatly reduced the need for many numerical tables (e.g., logarithms, trigonometric functions, powers, etc.) that make most handbooks bulky. However, most calculators do not give integrals, derivatives, series, and other mathematical formulas and figures that are often needed. Accordingly, this book contains that information in addition to a comprehensive table of integrals. A section on statistics and the accompanying tables, also not readily provided by calculators, have also been included.

The size of the book is comparable to that of many calculators and it is really very much a companion to the calculator and the computer as a source of information for writing one's own programs. To facilitate such use, the author and the publisher have worked together to make the format attractive and clear. Yet, an important requirement in a book of this kind is accuracy. Toward that end we have checked each item against at least two independent sources.

Students and professionals alike will find this book a valuable supplement to standard textbooks, a source for review, and a handy reference for many years.

Ronald J. TaHarida

About the Author

Ronald J. Tallarida holds B.S. and M.S. degrees in physics/mathematics and a Ph.D. in pharmacology. His primary appointment is as Professor of Pharmacology at Temple University School of Medicine, Philadelphia; he also serves as Adjunct Professor of Biomedical Engineering (Mathematics) at Drexel University in Philadelphia.

Dr. Tallarida received the Lindback Award for Distinguished Teaching in 1964 while in the Drexel mathematics department. As an author and researcher, he has published over 200 works, including 7 books, and has served as a consultant to both industry and government agencies.

Greek Letters

α	A	Alpha
β	B	Beta
γ	Γ	Gamma
δ	Δ	Delta
ε	E	Epsilon
ζ	Z	Zeta

Important Numbers in Science (Physical Constants)

Avogadro constant (N_A)	$6.02 \times 10^{26} \text{ kmole}^{-1}$
Boltzmann constant (k)	$1.38 \times 10^{-23} \text{ J}^\circ\text{K}^{-1}$
Electron charge (e)	$1.602 \times 10^{-19} \text{ C}$
Electron, charge/mass, (e/m_e)	$1.760 \times 10^{11} \text{ C}\cdot\text{kg}^{-1}$
Electron rest mass (m_e)	$9.11 \times 10^{-31} \text{ kg}$ (0.511 MeV)
Faraday constant (F)	$9.65 \times 10^4 \text{ C}\cdot\text{mole}^{-1}$
Gas constant (R)	$8.31 \times 10^3 \text{ J}\cdot^\circ\text{K}^{-1}$ kmole^{-1}
Gas (Ideal) normal volume (V_o)	$22.4 \text{ m}^3\cdot\text{kmole}^{-1}$
Gravitational constant (G)	6.67×10^{-11} $\text{N}\cdot\text{m}^2\cdot\text{kg}^{-2}$
Hydrogen atom (rest mass) (m_H)	$1.673 \times 10^{-27} \text{ kg}$ (938.8 Mev)

Neutron (rest mass)	
(m_n)	1.675×10^{-27} kg (939.6 MeV)
Planck constant (h)	6.63×10^{-34} J·s
Proton (rest mass) (m_p)	1.673×10^{-27} kg (938.3 MeV)
Speed of light (c)	3.00×10^8 m·s ⁻¹

Contents

1 Elementary Algebra and Geometry

1. Fundamental Properties
(Real Numbers)
2. Exponents
3. Fractional Exponents
4. Irrational Exponents
5. Logarithms
6. Factorials
7. Binomial Theorem
8. Factors and Expansion
9. Progression
10. Complex Numbers
11. Polar Form
12. Permutations
13. Combinations
14. Algebraic Equations
15. Geometry

2 Determinants, Matrices, and Linear Systems of Equations

1. Determinants
2. Evaluation by Cofactors
3. Properties of Determinants

-
4. Matrices
 5. Operations
 6. Properties
 7. Transpose
 8. Identity Matrix
 9. Adjoint
 10. Inverse Matrix
 11. Systems of Linear Equations
 12. Matrix Solution

3 Trigonometry

1. Triangles
2. Trigonometric Functions of an Angle
3. Trigonometric Identities
4. Inverse Trigonometric Functions

4 Analytic Geometry

1. Rectangular Coordinates
2. Distance between Two Points;
Slope
3. Equations of Straight Lines
4. Distance from a Point to a Line
5. Circle
6. Parabola
7. Ellipse
8. Hyperbola
9. Change of Axes
10. General Equation of Degree
Two
11. Polar Coordinates
(Figure 4.16)
12. Curves and Equations

5 Series

1. Bernoulli and Euler Numbers
2. Series of Functions
3. Error Function

6 Differential Calculus

1. Notation
2. Slope of a Curve
3. Angle of Intersection of Two Curves
4. Radius of Curvature
5. Relative Maxima and Minima
6. Points of Inflection of a Curve
7. Taylor's Formula
8. Indeterminant Forms
9. Numerical Methods
10. Functions of Two Variables
11. Partial Derivatives

7 Integral Calculus

1. Indefinite Integral
2. Definite Integral
3. Properties
4. Common Applications of the Definite Integral
5. Cylindrical and Spherical Coordinates
6. Double Integration
7. Surface Area and Volume by Double Integration
8. Centroid

8 Vector Analysis

1. Vectors
2. Vector Differentiation
3. Divergence Theorem
4. Stokes' Theorem
5. Planar Motion in Polar Coordinates

9 Special Functions

1. Hyperbolic Functions
2. Gamma Function (Generalized Factorial Function)
3. Laplace Transforms
4. Z-Transform
5. Fourier Series
6. Functions with Period Other than 2π
7. Bessel Functions
8. Legendre Polynomials
9. Laguerre Polynomials
10. Hermite Polynomials
11. Orthogonality

10 Differential Equations

1. First Order-First Degree Equations
2. Second Order Linear Equations (With Constant Coefficients)

11 Statistics

1. Arithmetic Mean
2. Median
3. Mode

-
4. Geometric Mean
 5. Harmonic Mean
 6. Variance
 7. Standard Deviation
 8. Coefficient of Variation
 9. Probability
 10. Binomial Distribution
 11. Mean of Binomially Distributed Variable
 12. Normal Distribution
 13. Poisson Distribution
 14. Empirical Distributions
 15. Estimation
 16. Hypotheses Testing
 17. t -Distribution
 18. Hypothesis Testing with t - and Normal Distributions
 19. Chi-Square Distribution
 20. Least Squares Regression
 21. The F-Distribution (Analysis of Variance)
 22. Summary of Probability Distributions
 23. Sample Size Determinations

12 Financial Mathematics

1. Simple Interest
2. True Interest Formula (Loan Payments)
3. Loan Payment Schedules

-
4. Loan Balance Calculation
 5. Accelerated Loan Payment
 6. Lump Sum Payment
 7. Compound Interest
 8. Time to Double (Your Money)
 9. Present Value of a Single
Future Payment
 10. Regular Saving to Accumulate
a Specified Amount
 11. Monthly Payments to Achieve
a Specified Amount
 12. Periodic Withdrawals From an
Interest-Bearing Account
 13. Periodic Withdrawals That
Maintain the Principal
 14. Time to Deplete an
Interest-Bearing Account
with Periodic Withdrawals
 15. Amounts to Withdraw for a
Specified Number of
Withdrawals I
 16. Amounts to Withdraw for a
Specified Number of
Withdrawals II
 17. Present Value of Regular
Payments
 18. Annuities
 19. The In-Out Formula
 20. Stocks and Stock Quotations
 21. Bonds

-
22. Tax-Free Yield
 23. Stock Options (Puts and Calls)
 24. Market Averages
 25. Mutual Fund Quotations
 26. Dollar Cost Averaging
 27. Moving Average
