

# DISSOCIATION CONSTANTS OF ORGANIC ACIDS AND BASES

This table lists the dissociation (ionization) constants of over 1070 organic acids, bases, and amphoteric compounds. All data apply to dilute aqueous solutions and are presented as values of  $pK_a$ , which is defined as the negative of the logarithm of the equilibrium constant  $K_a$  for the reaction

i.e.,

$$K_a = [H^+][A^-]/[HA]$$

where  $[H^+]$ , etc. represent the concentrations of the respective species in mol/L. It follows that  $pK_a = pH + \log[HA] - \log[A^-]$ , so that a solution with 50% dissociation has pH equal to the  $pK_a$  of the acid.

Data for bases are presented as  $pK_a$  values for the conjugate acid, i.e., for the reaction

In older literature, an ionization constant  $K_b$  was used for the reaction  $B + H_2O \rightleftharpoons BH^+ + OH^-$ . This is related to  $K_a$  by

$$pK_a + pK_b = pK_{\text{water}} = 14.00 \quad (\text{at } 25^\circ\text{C})$$

Compounds are listed by molecular formula in Hill order.
